Akash Chaudhary

Backend Engineer | Java · Python · Spring Boot · FastAPI · Microservices · Redis · Kafka | Fintech | Ex-Appreciate | Immediate Joiner

Siddharthnagar, Uttar Pradesh, India

Summary

Backend Software Engineer with hands-on fintech experience building scalable systems at Appreciate Wealth. I specialize in Java, Spring Boot, FastAPI, and microservices architecture, with a growing focus on Gen AI / agentic systems.What I've built:- Backend services & REST APIs (FastAPI, Spring Boot) powering fintech and digital wealth management products- US stocks & mutual funds infrastructure — integrated NASDAQ market data APIs into internal systems- Redis caching layer for slow-changing stock data, improving API response speed- Kafka-based event-driven communication across microservices for better scalability and decoupling- 30% improvement in application loading time through backend + frontend performance tuning- An internal Jira-to-Confluence agentic workflow using AI coding agents (Cursor) to auto-generate system design docs and scaffold code — my first hands-on exposure to agentic AI in production engineeringTech stack:Languages: Java, C++, Python, JavaScriptBackend: Spring Boot, FastAPI, Node.js, Express.js, Microservices, Event-Driven ArchitectureDatabases: PostgreSQL, MySQL, MongoDBInfra/Tools: Docker, Redis, Kafka, AWS (EC2, S3, Lambda), CI/CD, GitSide projects:- AI Resume Analyzer — full-stack platform (React, Node.js, MongoDB, Gemini API) that scores resumes for ATS compatibility and gives AI-driven improvement suggestions- Screenshot Organizer App — Flutter + FastAPI + PostgreSQL app with OCR-based auto-tagging and Supabase cloud syncAchievements:- 750+ DSA problems solved across LeetCode, GeeksforGeeks, Code360- Completed 100 Days of Code Challenge- 4★ HackerRank (C++)I'm looking to grow deeper into backend/distributed systems engineering, with an eye on Gen AI and agentic AI applications in production software. Open to Backend / Software Engineer roles — immediate joiner. akashchaudhary48898@gmail.com | github.com/codewithAkash1326

Experience

Appreciate
Software Engineer Intern
August 2025 - July 2026 (1 year)
Noida, Uttar Pradesh, India

- Developed Flutter frontend modules and backend services using FastAPI and Spring Boot for fintech and digital wealth management products.
- Partnered with the B2B team to build fintech solutions for US stocks and mutual funds, integrating third-party NASDAQ APIs to process market data into internal systems.
- Introduced Redis caching for slow-changing stock data, improving API response speed; used Kafka for event-driven communication across microservices, improving scalability and decoupling.
- Used AI coding agents (Cursor) and an internal Jira-to-Confluence agentic workflow to auto-generate system design docs and scaffold branch-level code, accelerating development velocity.
- Improved application loading time by 30% through frontend optimization, API performance tuning, and efficient data handling.
- Built responsive Flutter applications integrating REST APIs, using Provider and GetX for state management.
- Implemented backend workflows and service-to-service communication using FastAPI, Spring Boot, and SQLAlchemy.

Education

Chitkara University
Bachelor of Engineering - BE, Computer Science and engineering · (August 2022 - July 2026)

Barsati Yadav Intermediate College Pathardeiya
12th · (July 2019 - June 2021)
